*      Author: Jessica Schuler
*      Date Created: 11-2-13
*      Last Modified Date: 11-3-13
*      Filename: a4.cpp
*
*      Overview:
*          This program lets a user input a word or words. It then will
*          either produce the reverse of the word or tell the user if
*          the word is a palindrome based on user selection.
*      Input:
*          The user will input a word or words.
*      Output:
*          The output will be the word reversed or it will tell the user
*          if the input is a palindrome.
*****
```

```
#include<iostream> //library standard input/output
